COMPANY PROFILE

Central Iowa Power Cooperative (CIPCO) is Iowa’s largest cooperative energy provider serving 13 rural electric cooperatives and associations spanning 58 of Iowa’s 99 counties. CIPCO’s members serve a population of over 300,000 rural and urban residents and approximately 12,700 commercial and industrial accounts.

CIPCO is a member-owned, not-for-profit electric utility. As a generation and transmission cooperative, CIPCO supplies all power requirements for its member cooperatives; and as their power provider, CIPCO is dedicated to delivering quality, safe, and reliable service at the lowest possible cost. CIPCO owns and co-owns a diverse fleet of generation facilities, maintains approximately 2,000 miles of transmission lines, and has a natural gas line that runs through parts of Adair and Union counties.

Headquartered in Cedar Rapids, CIPCO also has offices in Creston, Des Moines, and Wilton with over 106 employees statewide.

COMMITMENT TO SAFETY, HEALTH & ENVIRONMENT

The safety and health of CIPCO employees and the general public is of paramount importance. From the executives to each person in the field, safety is a priority. All employees participate in monthly safety meetings and continue to look for opportunities that will make the workplace safer. Employees take great pride in the fact that injuries are few. When injuries occur, they are thoroughly investigated and used as a learning opportunity for all.

CIPCO also carefully examines close call/near miss incidents and utilizes an incident/injury prevention program called Stop-Think-Observe-Proceed (STOP). The STOP program is designed to encourage employees to share examples of incidents when they have identified a hazard, the danger it posed, and what was done to eliminate it.

It is important that we keep informed on safety requirements and trends in our industry. To help ensure this, CIPCO is an active member of the National Safety Council, Iowa-Illinois Safety Council, National Fire Protection Association, and the Iowa Electric Utility Safety and Training Association.

We conduct facility inspections at our generation stations and conduct field observations of transmission operations work practices. All of our efforts are designed to establish a work environment for our employees as safe as we can make it. The standard of performance is high, but CIPCO has repeatedly proven that we are up to the task.

CIPCO also takes the role of environmental stewardship very seriously. For decades, CIPCO has been making investments in new technology for our electric generation and transmission systems to reduce the environmental impact. We have a long history of environmental compliance as well as an internal audit program that has long ensured our accountability and responsibility in the environmental arena.

CIPCO employees work closely with environmental regulators on local, State, and Federal levels. We take pride in the relationships that we’ve developed with regulators over the years. These working relationships are a partnership in environmental protection.
